

**HESHBON®**

### Main Screen

**Various modes to balance wheels**  
Various modes are supported so that tire wheel can be facilitated conveniently and easily. Especially, aluminum wheel function is additionally supported to be applicable to aluminum wheel recently used by plentiful drivers.

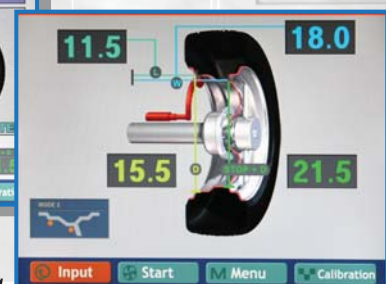

### Self-calibration function

Self-calibration is to be executed for precise repairs in order to assure right measurements by zero-setting.

**Weight separation for aluminum wheel (Hidden weight)**

Unbalanced position on an aluminum wheel's outer plane is divided into two parts, enabling lead weights to be applied behind two wheel spokes.
